

INTERPRETACIJA SKELETNOG NALAZA S LOKALITETA MUZEJ GRADA ZAGREBA - SAMOSTAN KLARISA

Boris Mašić,
Muzej grada Zagreba,
10000 Zagreb - Hrvatska

U uvodnom dijelu izlaganja osvrnut ću se na tijek arheoloških istražnih radova na lokalitetu Muzej Grada Zagreba - Samostan Klarisa koja su, s manjim prekidima, trajala od 1990. - 1995. godine. Istraživanja je proveo Arheološki zavod Filozofskoga fakulteta u Zagrebu pod vodstvom prof. Marije Šmalcelj. Poseban naglasak, u tom dijelu izlaganja, dati ću na muzejsku prezentaciju pronađenog arheološkog lokaliteta te ubikaciju gradskih groblja na području srednjovjekovnog Gradeca.

Središnji dio predavanja biti će interpretacija nalaza skeleta novorođenčeta pronađenog ispod hodne razine južnog samostanskog krila, u predsamostanskom arheološkom sloju, definiranom čvrstim stratigrafskim jedinicama. Potreba za stručnom obradom ovog nalaza proistekla je iz različitih tumačenja nalaza, s obzirom na srednjovjekovni samostanski kompleks unutar kojega je skelet pronađen.

INTERPRETATION OF THE SKELETON FIND ON THE SITE OF THE ZAGREB CITY MUSEUM - CONVENT OF CLARISSAE

Boris Mašić,
Zagreb City Museum,
10000 Zagreb - Croatia

The introductory part of the report will be concerned with the course of archaeological research on the site Zagreb City Museum - Convent of Clarissae that has, with smaller interruptions, lasted from 1990 - 1995. The research was conducted by the Archaeology Department of the Faculty of Arts in Zagreb led by prof. Marija Šmalcelj. This part of the report will particularly stress the museological presentation of the found archaeological site and the position of urban cemeteries in the area of mediaeval Gradec.

The central part of the report will include the interpretation of the newborn baby's skeleton found under the walking layer in the southern convent's wing, in the pre-convent archaeological layer, defined by fixed stratigraphic units. The need for further expert work on these finds came from the fact that the finds were interpreted differently, considering the mediaeval convent complex where the skeleton was found.
